CBMR Series

Capacity Building in Medical Research Series

By Department of Community Medicine

First talk on 10th November 2021

Sree Gokulam Medical College and Research Foundation aims to be recognised for its benchmark academic excellence, research productivity and for producing globally competent medical professionals. We are proudly introducing the concept of implementation research for medical professionals for the first time in Kerala. Taking a step forward, this initiative is aimed towards capacity building by providing high quality training with expertise in the field of scientific research.

Implementation science is the scientific study of methods and strategies that facilitate the uptake of evidence based practice and research into regular use by practitioners and policy makers.

Implementation science research is used to close the gap between what we know (scientific evidence to improve health) and what we do (actual practice) by assessing and addressing barriers to support uptake and integration of proven interventions and evidence-based practices.
